EMPOWERING WOMEN TO ACHIEVE THEIR BEST SELVES

Having completed more than 30,000 cases of laser tattoo removal, 25,000 cases of Botox®, 15,000 cases of fillers, and thousands of cases of liposuction, it's safe to say Dr. Anne White has substantial experience in cosmetic enhancement.

In fact, she was one of the first physicians to bring Botox to the Winston-Salem region in 2002 after training under Botox pioneer Dr. Jean Carruthers.

As White's practice, Carolina Laser and Cosmetic Center, has grown over the years, so has her list of services. She remains dedicated to making the newest and most proven technologies available to her patients.

Dr. Anne White offers the latest, safest, and most effective nonsurgical cosmetic procedures.

Newly Arrived!

For increased sexual function, the Geneveve™ by Viveve® procedure uses radiofrequency to tighten vaginal tissue, increase lubrication, decrease urinary stress incontinence, and increase the quantity and quality of orgasms.

"It requires no downtime, no bleeding, and just one treatment," White says. "There's been an awful lot of discussion about enhancing the male sexual experience over the years, and I'm proud to offer an option

that empowers women through enhanced female sexual function."

Another new service in White's arsenal is SculpSure® laser contouring, a noninvasive procedure that destroys fat cells to tackle stubborn areas such as the stomach and lower back.

"There's no downtime, and it works twice as fast as

other laser contouring methods," says White. The technology also works for reducing fat under the chin.

As for patients simply seeking to turn back the hands of time, White suggests Botox for upper-face concerns like crow's feet, horizontal brow lines, and vertical lines between the brows, and she recommends fillers in the lower face to restore youthful volume.

"Unlike a traditional facelift, noninvasive procedures don't change what you look like—they just give you an improved version of yourself, without downtime or incisions," White says.

All About the Patient

For those who might be nervous about taking the plunge into cosmetic enhancements, White offers this reassurance: "Everything we do is FDA approved and proven to be safe. Patients can feel confident that I have more experience in these procedures than anyone else in the area."

Patients needn't worry about being "upsold" on unnecessary procedures either. During the consultation, White listens carefully to patients' concerns and helps them articulate the exact areas for which they'd like improvement. "What's important to the patient is what's important to me," she says.

"I feel very blessed to serve patients though this work every day."
