

Greater Insight, Brighter Outcomes

*From Nonsurgical Spine Care To Cutting-Edge
Surgery, Carolina Neurosurgery & Spine Associates
Gets Patients Back To The Lives They Love*

Pioneering Brain & Spine Care Since 1940

Being diagnosed with a spine or brain disorder can be both frightening and debilitating, but it does not mean you have to leave home for outstanding medical care. There is a nationally recognized group of neurosurgeons, physiatrists and physical therapists with 10 offices across the Charlotte and Greensboro regions who are ready to help.

Carolina Neurosurgery & Spine Associates is one of the largest and most established neurosurgery practices in the country, with doctors who have made a profound impact on the lives of adults and children for nearly 80 years. The brain and spine expertise of our specialists is unrivaled, as is their commitment to innovate, educate, and heal.

Comprehensive Brain & Spine Care

Carolina Neurosurgery & Spine Associates specializes in diagnosing and treating all types

of brain and spine injuries and disorders. This includes brain tumor care, treatment of brain aneurysms and stroke, concussion management, and pediatric neurosurgery.

Our on-site MRI and X-ray services can detect the source of patients' problems, eliminating the need to travel to a separate imaging facility.

Conservative Treatment For Spine Problems

Our practice is committed to delivering comprehensive spine care with a focus on conservative, nonsurgical treatment. In fact, 85% of our patients who have chronic or sudden spine pain find relief without surgery. We offer an entire team of physicians and physical therapists who specialize in nonsurgical care. We also have fellowship-trained neurosurgeons who offer the latest advancements in outpatient and minimally invasive options for relief from back pain, using incisions no longer than one inch.

The team of board-certified physiatrists at our practice provides a holistic approach to spine care, including therapeutic spine injections. Our on-site physical therapists are specifically trained in spine disorders and provide individualized patient care to improve mobility and reduce motion impairments.

Improving Outcomes

Almost a decade ago, our practice launched what is now considered the gold-standard outcomes database in neurosurgery. This data gives surgeons and practices around the country the ability to benchmark performance and improve patient outcomes.

Carolina Neurosurgery & Spine Associates has changed the lives of countless patients with brain and spine disorders. From minimally invasive procedures with mere one-inch incisions to cerebrovascular techniques to treat brain aneurysms, we continue to create brighter outcomes for patients every day.
