

CHARLOTTE HEALTHCARE PROFILES

“With our innovative and technologically advanced equipment, our patients can get a complete crown in just one visit—no temporary tooth or follow-up visits necessary!”

—Dr. Tori Irvine, Owner,
Providence Dentistry

Charlotte Practice Delivers Quality Dentistry

Dr. Tori Irvine and Dr. Shannon Moran have more than 35 years of combined dental experience, ensuring patients receive the highest quality and most efficient care possible.

Dr. Tori Irvine understands the value of time. As a result, the owner of Providence Dentistry and her colleague, Dr. Shannon Moran, go above and beyond to create a practice that is not only professional and comfortable but also time conscious.

“Because of the advanced technologies we employ, we can usually turn around in one day procedures that used to take weeks,” Dr. Irvine says. That includes services like crowns, veneers, bridges, and even clear dental aligners.

Technological Innovations

Cutting-edge technology abounds at Providence Dentistry. One example is an intraoral imaging camera that creates 3D images of patients’ teeth after only a few minutes of scanning. The procedure is noninvasive and thoroughly explained to patients. Having 3D images of patients’ teeth gives Drs. Irvine and Moran the ability to make all types of restorations—including implant crowns, bridges, and veneers—in a single office visit. The images also allow for more efficient scanning and the creation of both full and partial dentures.

“For the most part, we have eliminated the need for those old, squishy impressions, while also decreasing the time it takes to complete necessary dental work,” explains Dr. Irvine. “Traditional dentistry often requires several visits—

and several days off work. Now, we can save patients time and money.”

Providence Dentistry’s in-office 3D printer has been another impactful innovation for the practice, especially in terms of clear aligners.

“When we think of a beautiful smile, most of us think of nicely aligned teeth. While many people want their teeth to be straight or aligned, they do not want to wear traditional metal braces. Clear aligners are a great alternative,” Dr. Irvine explains. With the 3D printer, aligners can be fabricated on premises. In a matter of days, patients can have their first set of trays and be on their way to a straighter smile.

Aesthetics

Both Dr. Irvine and Dr. Moran are members of The American Academy of Cosmetic Dentistry and have, over the years, honed the skills that enable them to create beautiful smiles. The technology they employ adds value to their practice. An immense collection of different porcelains, for example, can be utilized for numerous procedures, perfectly matching tooth color for the best possible aesthetics.

“It’s a game changer,” says Dr. Irvine, “for patients requiring crowns, bridges, and veneers.”

Family Office

Drs. Irvine and Moran see patients of all ages at Providence Dentistry, and in addition to the high-tech, one-visit

procedures they are known for, they also provide routine dental care, fillings, root canals, extractions, teeth whitening, and dental implants in a welcoming, comfortable environment. Both dentists understand the urgency of emergencies and make every effort to fit patients in when an unplanned dental mishap occurs.

Comfort

What if you could get all of your dental work done in one visit and do so while in a dream-like state? The Providence Dentistry team is fully and professionally trained to administer nitrous oxide (laughing gas) as well as minimal conscious sedation. Both offer a more relaxed experience for those who struggle with fear and anxiety, and the entire team goes to great lengths to provide a pleasant, efficient, and effortless patient experience.

“We’re here to make sure patients are comfortable throughout their dental procedures,” Dr. Irvine adds. “We look forward to providing top-quality dentistry for you, your family, and your friends.”
