

## At Memorial, it's not just another heart. It's Alivia's heart.

**Alivia was just a baby when her heart began failing**—a condition that typically requires a transplant. But the team at Memorial acted quickly to diagnose the problem and refer for treatment. Alivia was successfully treated without a transplant. Now she is a healthy, active 8-year-old with a bright future.

That's why people choose Memorial Heart & Vascular Services: We care more about the people we treat than the number of people we treat. See Alivia's story at [MemorialHeartStories.com](https://www.MemorialHeartStories.com).

**It's not just another heart.  
It's *your* heart.**
