

Think a stroke couldn't happen to you? Think again.

Today's stroke survivors are younger and more like you than you think. According to the American Heart Association, one in 5 women will have a stroke. Your risk is even higher if you are pregnant, take birth control pills, or have atrial fibrillation.

SUSPECT STROKE - ACT FAST

When it comes to stroke, you have to act FAST. If you experience facial droop, can't lift your arms, or have difficulty speaking - it's time to call 9-1-1. And get to a comprehensive stroke center - like Grady Health System's Marcus Stroke and Neuroscience Center.

GRADY'S GOT YOU

Due to the high incidence of stroke in the Southeast, Grady built the world's first 24/7 stroke center. Our Marcus Stroke and Neuroscience Center doesn't just treat stroke. We pioneer techniques that improve patient outcomes and change lives.

ALWAYS INNOVATING

Since its opening in 2010, Grady's assembled a world-renowned team of neuroendovascular and rehabilitation medicine specialists to treat stroke - including post-stroke conditions like carotid web - a condition often seen in younger stroke patients.

MOBILE STROKE UNIT

And we'll never stop innovating. We added a mobile stroke unit to diagnose and treat strokes from your driveway. Because we can start treatment faster, patients often walk out of Grady just days after being treated for a stroke.

Think stroke can't happen to you. Think again – and count on Grady to stop a stroke in its tracks.
