

## For Dr. Newton, Press One

Double board-certified and fellowship-trained orthopedic surgeon William Garner Ransom Newton, M.D., provides personalized, advanced care for patients with knee and shoulder pain or sports injuries.

From their first phone call to Orthopaedic Surgery & Sports Medicine of Texas (OSSM Texas), patients experience an unusual level of personal attention. “For Dr. Newton, press one,” recites the office’s automatic answering system. It’s the practice’s only option.

“I personally see each patient at every visit,” says William Garner Ransom Newton, M.D., a highly respected orthopedic surgeon who completed his orthopedic surgery residency at Stanford University and has over 30 years of experience treating knee and shoulder pain and sports-related injuries. “I won’t treat someone then leave the follow-up to someone else. I don’t rely on physician assistants to evaluate patients or communicate with physical therapists. Every patient gets my full attention—from initial diagnosis to postoperative care and rehabilitation.”

Dr. Newton’s commitment to providing concierge-level care makes him exceptional in his field of practice. While many orthopedic surgeons focus on volume of cases to increase the revenue of their practice, Dr. Newton delivers state-of-the-art care while concentrating on building personal connections.

The in-depth doctor-patient relationship is an old-fashioned idea Dr. Newton learned from his father. A cardiologist, the elder Dr. Newton resisted joining large medical groups and chose, instead, to operate a single practice.

“That’s the way I thought medicine was supposed to be,” he says. “It’s my calling.”

Dr. Newton tries to maintain a manageable caseload, resulting in more

face-to-face time with patients and more time to communicate with them on the phone or by email. Dr. Newton is able to avoid unnecessary delays in care—when possible, urgent cases are seen within 24 hours.

### Knees, Shoulders, and Uh-Ohs

Dr. Newton specializes in arthroscopic surgery, sports-related injuries of the shoulder and knee, and knee replacements. His patients include professional athletes, weekend warriors, and those with physically demanding jobs, such as construction workers who put their joints under extreme or repetitive stress.

Overwhelmed by discomfort and lack of mobility, active men and women with these injuries find themselves forced into a sedentary lifestyle. Dr. Newton treats professional athletes who need to compete on the field, but most patients are people who want to resume work, hobbies, and recreational activities pain-free. Getting to know someone’s objectives helps him design specific treatment plans to return patients to their jobs and the activities they love.

“It’s very gratifying when patients tell me their treatment was life-changing. They regained stability to return to running after arthroscopic surgical repair of the ACL. They could once again compete in sports or lift their children after minimally invasive surgical techniques returned full mobility to the shoulder,” explains Dr. Newton. “My goal is to help each patient regain pre-injury function and get back into the game of life.”

Dr. Newton has served as a Chairman of the Orthopedic Surgery Department of Texas Health Resources, Dallas. He has also been selected as one of D Magazine’s Best Doctors in Dallas and is a board member of the Genesis Physicians Group.
